There should be a match in every row for both parents – the matches that I circled are probably just coincidences.

INTERPRETATIONS

COMBINED RELATEDNESS INDEX: **0.0000**   PROBABILITY OF RELATEDNESS: **0.0%**

*The DNA from the alleged relative(s) was compared to the tested child. Based on testing results obtained from the analyses of the DNA loci listed, the probability of relatedness is **0.0%**. The probability of relatedness is calculated by comparing to an untested, unrelated, random individual of the Caucasian population (assumes prior probability equals 0.50).*

Based on the samples received from tested parties whose identities cannot be independently verified, I , the undersigned Laboratory Director, delcare the genetic data is correct as reported during 03/2017.

NOTE: Since the samples were not collected under a strict chain of custody by a third neutral party, and the Laboratory cannot verify the origin of the samples, this test result may not be defensible in a court of law for the establishment of paternity and other legally related issues. The tested parties expressly understand that the result from this test is only for personal knowledge and curiosity.
